Dummy Datas
1. User - list of users and their corresponding details
2. Products - list of products and their corresponding details
3. Cart - list of products in the cart of the current user
4. OrderHistory - list of all orders made by the current user
5. OrderList - list of all orders made by all customers in the shop

Notes
- Most features are working such as Adding, Deleting, and Editing of Products, Cart, OrderHistory, OrderList, and Reviews. This has been done through the use of states from ReactJS.
- On the product page, if you click on the '# reviews', it will show you a customer review card for that product where you can see the reactions as well as the review stats.
- This was using webpack.
